LOT 610

A Michael Allen Bolton silver and amethyst single stone ring, collet set with an oval cabochon amethyst, the mount and sides with beaded decoration, London 1973, weight 39.8g, ring size approx N1/2.

Estimate: £150 - £250

Condition Report

Amethyst has a few surface reaching inclusions which do reflect the light, and a couple of light scratches. It moves ever so slightly within its setting, but is secure.

The beaded decoration has some denting and scratching. There is no evidence to suggest any of the beads are missing, they are fairly securely attached.

Some of the gilded decoration to a few of the beads has rubbed away, leaving only patches to those beads (not all the beads were originally gilded).

Otherwise the ring is in fairly good condition.
